ABSTRACTED-PUB-NO: WO 200053722A

BASIC-ABSTRACT:

NOVELTY - An aggregated composition (I) comprising a polypeptide having the transport function of a transport protein VP22, and an oligonucleotide or polynucleotide, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) making (I), comprising:

(a) mixing a polypeptide with the transport function of VP22 with the oligonucleotide or polynucleotide; and

(b) allowing the obtained mixture to form aggregates of particle size 0.1-5 microns, e.g. 1-3 microns; and

(2) a cell preparation which has been treated with (I).

ACTIVITY - Cytostatic; antipsoriatic; dermatological. No biological data is given.

MECHANISM OF ACTION - Gene therapy.

USE - (I) is useful for preparing a medicament for therapy or prophylaxis of a disease and for delivering molecules to cells in vitro. The medicament is suitable for phototherapy (claimed). The aggregates are delivered to target cells such as tumor cells in vivo and are useful for treating psoriasis, eczema or skin cancer.

ADVANTAGE - The aggregates are resistant to trypsinization of cultured cells containing them, and rapid disintegration of the aggregates can be achieved by exposure to fluorescent or visible light.
